## Summary

Backend-focused software engineer with hands-on experience in .NET web application development, C++ systems programming, and scalable API design. Independently owns and delivers production features end-to-end. Strong foundation in data structures, database internals, and concurrent systems.

## Education

### Galgotias University

B.tech in Computer Science and Engineering (AI&ML)

June 2022 – June 2026

- CGPA: 8.18

## Technical Skills

**Languages:** C++, C, C#, JavaScript, TypeScript

**Backend:** ASP.NET Core, Node.js, Express, REST APIs

**Databases:** SQL Server, PostgreSQL, MongoDB, SQL

**Frontend:** React, Next.js, Tailwind CSS

**Tools & Platforms:** Git, GitHub, Microsoft Azure, Microsoft Fabric, Vercel, Azure DevOps

## Experience

### Associate Software Engineer

MAQ Software India Limited

Noida

November 2025 – Present

- Independently own and deliver user stories end-to-end for a client-facing React + ASP.NET Core data visualization web application serving 50+ users.
- Develop and maintain backend APIs and business logic in C#; data layer backed by Microsoft Fabric lakehouse.
- Currently building an multi agentic AI system within the web app that answers natural language questions over the data, analyses it and generates detailed reports.
- Conduct exploration and spike work independently to evaluate technical approaches before implementation.
- Integrate Microsoft Fabric pipelines and Azure-based data workflows into enterprise reporting solutions.

### Frontend Blockchain Intern

EliteKods

Remote

March 2024 – May 2024

- Integrated frontend applications with multiple external APIs and production systems.
- Collaborated with engineers to debug and stabilize production features.

## Projects

### Cryptocurrency Matching Engine [Project Link](#)

October 2025

- Built a high-performance order matching engine in C++ supporting market and limit orders.
- Implemented price-time priority matching with deterministic execution guarantees.
- Exposed engine via REST API using Crow for real-time order placement and execution.
- Designed thread-safe data structures for concurrent order processing with low latency.

### Mini Database Engine (C++17) [Project Link](#)

August 2025

- Implemented a transactional storage engine demonstrating DBMS and OS internals.
- Improved system performance by 35% using buffer pooling techniques.
- Applied memory management, file I/O, and concurrency in C++17; modular cross-platform codebase.

### Full Stack Quiz Application [Project Link](#)

July 2025

- Designed RESTful APIs for quizzes, users, and leaderboards with JWT auth and RBAC.
- Supported 50+ concurrent users via optimized queries and indexing; scalable MongoDB schemas.

## Achievements

- Earned Microsoft certifications: DP-600, DP-700, and DP-800.
- Published research work on AI-based Behavioral Analysis and Interview Performance Assessment.
